

## 5 AI Tools That Save Me 100+ Hours of Editing!

<https://www.youtube.com/watch?v=1C-6Dgm9Fm8>

these are five AI tools that have saved us hundreds of hours of video editing on our YouTube videos and the very last one in this video Nate uses in every single video that he edits for think media so tell us the first one Nate what's a what's a great tool that we can use so the first AI tool on our list is cap cut which actually is a video editor and there's a bunch of AI tools within that there's a really cool feature called AI background remover so if you wanted to put some cool text behind you as a subject if you want to do this before using this tool you have to manually draw and cut yourself out which is so tedious and takes you know hours just to do that but with AI background remover it's one click of a button another really cool one is video upscale so if you do have some footage that maybe is like old footage and you want to blow it up make it 4K make it a little bit more high definition you can also do that and a lot of these tools are free some of these might be on the paid pro version but there's actually a ton of free AI tools within cap cut there's a ton of options you can do where it actually uses AI to do a dolly zoom in or so it's actually creating like a 3d effect within the photo it creates 3D effects there's a ton of cool options in there for photos to like bring them to life for video and it's literally you click it once you just let it load it generates the background and it's really really cool you can even actually stretch out your photos so you can kind of see beyond what you even shot in the first place so a lot of these AI tools that people are used to using they've brought it into into the video editor which I think is really cool because it saves you time from like using all these different AI apps and so they've just kind of like brought them into your video editor which is really really cool and one tool that you were showing me is a skin smoothing effect so if you maybe forgot to put on makeup or something and you want to look a little bit more presentable in front of the camera there's a lot of cool adjustments brightening up your teeth all those things are so easy to do inside C gut it's crazy cuz like yeah those would be so hard to do and so they made it really easy and it actually works really really well with the face tracking so impressed with just what you showed me it's not glitchy at all it looks really impressive yeah a lot of cool AI tools just within caput and another one uh and there's probably even more that we could get into but like another one is the reframing so if you have like a YouTube video you want to turn it into a YouTube short all you have to do is reframe it and it will like track you as you move left and right with your face so that you stay in that vertical frame and then you can add in Auto captions and do all of that really easily and so those are some of my favorite AI tools within cap cut and they're constantly coming out with new ones and uh definitely worth checking out especially just with the free version there's a lot you can do in there so the second AI tool on our list has actually saved my bacon a few times and that is Adobe podcast enhance so one of the things that is really hard to fix is terrible audio and for YouTube you need to have at least good audio or else the video is just not watchable so right now I actually have my phone recording on the table just using the built-in iPhone microphone and this is what it sounds like just straight up and now if I turn on Adobe podcast enhanced it sounds more like a professional podcast microphone more similar to what you're you know we're just using right now but this does truly save your audio if you have

really rough audio and there's just no way of fixing it for instance we had a podcast with Patrick B David and they were on a jet so it was really noisy and they had some audio issues I was able to export out all the audio as an MP3 upload it to Adobe podcast and a few minutes later it spit it back out I'll download it resync up the audio and it sounds you know it's usable so I do a few EQ things and posts just to kind of make it sound even better but it is so useful in those few times where you just have crappy audio it's just been a lifesaver now the third tool on our list that has saved us a ton of time is Opus and this is kind of like a video editor that works for you where you don't have to do anything it just starts editing your video so what it does specifically is it'll take a long form piece of content or even a video like this talking head videos it works great all you have to do is just put that video into Opus you select a few buttons and then you let it load out and it basically finds the most viral moments from the talking piece the podcast or the talking head video and then it puts on captions for you even gives you a title and description so it does like 95% of the work sometimes what I like to do to get the best results is use that as my Foundation and I go through and watch them one thing to note though on Opus is it will give you like a virality score at the top and that's not always like what I would think is the best clip sometimes if you go like six seven cuz it'll give you like videos sometimes but like seven videos down there's like a really good clip here like I'm like oh that would do well on YouTube so still go through them watch them then I like to download them and then if there is a moment in that short that feels a little bit repetitive or boring I'll also cut that out but like this gets me % of the way there and it'll give you a ton of shorts ready to go so ultimately this just saves us hours and especially if you're starting out on YouTube and you want to utilize shorts or even you just want to utilize this on Instagram or TikTok to let more people know that you are posting YouTube videos this is a great tool for video editors so the fourth AI tool on this list is great if you have a podcast and that is video.

a and Nolan we actually have been using this for a secret think media Clips Channel talk more about that yeah so we have think Clips which basically are long form you know anywhere from like two to maybe plus minute clips from our long form podcasts from long form interviews or talking head videos and this does the entire editing job for us so rather than hiring an Editor to go in and search for things this basically does it automatically exactly so I maybe spend 20 minutes going through these clips but I upload the video to video. and then it takes the entire video and it pulls out the best moments so whether it's like a two-minute clip or a five minute clip it will then give me a great title and I can just go through I can read through all the topics all the titles and I basically don't even have to watch the podcast so let's say Sean uploads a podcast tomorrow instead of me watching an hour long podcast and trying to find the best moments I don't do that anymore I just have to copy the link put it into video.

a it's then going to take every single second from seconds to the very end it's then going to chapter and section it out with YouTube titles all I got to do is read the YouTube titles and go that one's really interesting let me watch it it will add in you know subtitles if we want to but we just leave it blank I'll then export that upload it to the think Clips Channel we just get a thumbnail made you know maybe dial in the title and then it's good to go but this does most of the work for you so am I out of a job potentially yes hey real quick I want to shout out today sponsor video. video. is a tool where you can upload your long form videos or podcasts and it will automatically chop it up for you to repurpose into shorts and clips with customizable animated captions and brand kits my favorite way to use this tool is for finding podcast clips

that we can upload to our YouTube channel I simply upload a video and then it breaks down the entire conversation so that I can skim through the topics to find something that would make a great clip this saves me a ton of time so I don't have to rewatch the entire podcast looking for good clips from here all I need to do is edit it how I would like X or it and then upload it to our YouTube channel now if you want to give it a try check out the link in the description of this video now number five I know it's probably your favorite because you use this on every single video so explain this tool does so a big part of my job is just taking a conversation like this or a talking head video and just cutting it down so you know sometimes during this conversation we're going to mess up and you know have to cut things out what if an AI tool could do this for you uh there is and which is amazing it's called gling doai and basically I take the a-roll clip that we filmed our talking head video upload it it's going to process for a few minutes but then is going to list everything out kind of like a Word document and from there I can go in and highlight and cut and remove things but automatically what's going to do it's going to find the best takes that you've used and cut everything else so if you recorded a take and it took you seven times to get it right it'll cut out all the other six ones and just give me the best ones now I do have to do a little bit of finessing going in there and removing stuff that maybe is not need and the great thing about gling is you know you could export this as an mp4 and just be done with it or what you could do is export it to an editor like Premiere Final Cut or resolve and it basically keeps all your Cuts there so let's say I want to adjust you know the timing of each clip I can actually go into resolve and I can adjust you know where the clip ends so this is super useful for me I start that as my Baseline once I kind of cut it out I know my a roll is good I start adding b roll music and you know it definitely helps ease that process if you guys want to learn how to edit better YouTube videos and avoid the top mistakes that most YouTubers make then click on the screen and check out this conversation I had with our editor Nate we'll see you guys in the next video
