Video 3: How I'd Teach a 10 Year Old to Build AI Agents (No Code, n8n)

Video URL: <https://www.youtube.com/watch?v=6DLZK7XDOGo>

Description:

■ Join my free Skool community for access to a learning community and the workflow shows in my videos! ■

<https://www.skool.com/ai-automation-society/about>

■ Join my paid Skool community if you want to go deeper with n8n and AI Automations■

<https://www.skool.com/ai-automation-society-plus/about>

■ Start Building with n8n! (I get kickback if you sign up here - thank you!)

<https://n8n.partnerlinks.io/22crlu8afq5r>

In this video, I break down building an AI Agent so simply even a 10-year-old could do it! I'll walk you through what an AI agent is and how to build a basic email agent in n8n that can automatically send emails for you.

No coding experience? No problem! I'll guide you step-by-step, showing just how quick and easy you can get this set up. By the end of this video, you'll have your very own email-sending AI agent up and running in no time.

Video 4: AI Agents Tutorial For Beginners

Video URL: <https://www.youtube.com/watch?v=EUey9L9sgzE>

Description:

In this beginners friendly lecture, we will build AI agents with llama3.3 and PhiData framework. We will build a finance agent that will compare two stocks in terms of analyst recommendations and company fundamentals. Then we will build a team of agents where the first agent will be a web search agent. The second one will be a finance agent and a team lead agent will coordinate with these two agents to accomplish certain tasks.

Hi there! I'm Dave Ebbelaar, founder of Datalumina®, and I'm passionate about helping data professionals and developers like you succeed in the world of data science and AI. If you enjoy the tutorial, make sure to check out the links in this description for more resources to help you grow. At Datalumina, we help developers and organizations unlock the full potential of AI and data by turning complexity into capability. Whether you're learning Python, freelancing, or building cutting-edge AI apps, we provide the tools, guidance, and expertise to help you succeed.

Video URL: <https://www.youtube.com/watch?v=iadTw0HwfNA>

In this video, I walk you through a simple, three-step process to fully automate your social media marketing—no manual posting needed. I use LinkedIn as an example, but you can apply this method to other platforms too.

Collect Content: Use the RSS app to gather content from any source on the web. I show you how to create feeds tailored to specific topics like generative AI.

ChatGPT rewrites the content in your preferred tone and style.

Post Automatically: The final step automatically posts the rewritten content to LinkedIn. You can adjust settings to post to personal profiles or company pages.

This entire setup takes less than 10 minutes and keeps running until you turn it off, saving you tons of time while maintaining a consistent presence on social media.

■ ABOUT ME

Hey everyone, my name is Jono. I run a 7-figure service business that offers DJ, photo, video services (#1 largest in Canada), and spent years figuring out how to automate every part of it (and hired the roles that I couldn't). Conservatively, I used to work 80+ hours per week, before sunrise till long after sunset; missing gatherings, family events and everything in between. Through automation though, I was able to replace my job. My goal is to help share what worked for me, in a dream of helping others find true success with their passion.

Please subscribe, like and comment below if you have any questions! Thank you ■

<https://www.skool.com/the-ai-forge/about>

proxy link:

<https://aibuilders.short.gy/evomi>

crawl4ai:

<https://crawl4ai.com/>

ollama:

<https://ollama.com/>

■■ Disclaimer: This video is for educational purposes only. I have made every effort to ensure that this content does not encourage illegal web scraping or unethical practices. Web scraping should always be done in compliance with a website's terms of service and relevant laws. I am not responsible for any misuse of the techniques discussed in this video. Please use these tools responsibly.

In this video, I give an overview of web scraping techniques, covering how to bypass common anti-bot protections like CAPTCHA, geoblocking, and rate limits. The goal is to provide you with a clear understanding of what's possible, so you know where to start and how to explore these topics further. I demonstrate how to use Puppeteer for simulating real user behavior, proxies for secure and anonymous scraping, and AI models like DeepSeek to structure extracted data.

This is not an in-depth coding tutorial but rather a guide to help you understand key concepts and approaches. If you're looking for the full code, I'll be sharing it in the comments.

Video 12: CopyCoder + Cursor : How To Clone Any Web App Instantly (Tutorial)

Video URL: <https://www.youtube.com/watch?v=u1ltNN-LRrs>

Description:

Video 13: Clean Knowledge Bases: Crawl4AI Scraping + n8n / Voiceflow RAG Agent

Video URL: <https://www.youtube.com/watch?v=tolgKsZ65GY>

Description:

Clean knowledge bases are essential for your agents in order to continue answering questions and maintain quality outputs. Standard web scrapers can inject additional unnecessary chunks to the LLM, making its job harder.

You can automate the process with Crawl4AI, n8n, google drive, and voiceflow.

This video covers the default scraper issues, setting up a better workflow, and integrating the cleaned data into Voiceflow.

'Marketing Against The Grain' is a HubSpot Original Podcast // Brought to you by The HubSpot Podcast Network // Produced by Darren Clarke.

About the Show

Kipp Bodnar, HubSpot's CMO and Kieran Flanagan Zapier's CMO, lead you down the rabbit hole of marketing trends, growth tactics and innovation. On the way you'll pick up undiscovered strategies to

give you that slight edge for success. These are not your typical twitter thread regurgitated marketing tactics that everyone is doing. These are new methods, with unfiltered examination of successful fresh ideas.

Video 16: 7 Make.com Automations That Make Me \$200,000/Yr (Steal Them)

Video URL: https://www.youtube.com/watch?v=RWKJJx_Az7M

Description:

GET ALL 10 BLUEPRINTS ■■

<https://leftclicker.gumroad.com//vrcoh>

JOIN MY COMMUNITY & GET YOUR FIRST AUTOMATION CUSTOMER ■

<https://www.skool.com/makerschool>

SUMMARY ■■

Jam-packing this full of *real* Make.com automations that run both my content agency and automation agency. You'll love #3. Includes a few email automations, Skool automations, PandaDoc automations, payment automations, and hiring automations.

If you have any questions about how to put them together, or don't understand the blueprints, just shout.

WHY ME?

If this is your first watch—hi, I'm Nick! TLDR: I spent five years building automated businesses with Make.com (most notably 1SecondCopy, a content company that hit 7 figures). Today a lot of people talk about automation, but I've noticed that very few have practical, real world success making money with it. So this channel is me chiming in and showing you what **real** systems that make **real** revenue look like!

Hopefully I can help you improve your business, and in doing so, the rest of your life :-)

Please like, subscribe, and leave me a comment if you have a specific request! Thanks.

Video 20: Turn ANY Website into LLM Knowledge in SECONDS

Video URL: https://www.youtube.com/watch?v=JWfNLF_g_V0

Description:

One of the biggest challenges we face with LLMs is their knowledge is too general and limited for anything new. That's why RAG is such a huge topic when it comes to AI right now - it's a method for providing an LLM with external knowledge you curate so it can become an expert at something it wasn't before - a specific AI framework, your ecommerce store, you name it. The problem is, that "curate" step can be very difficult and slow.

That is where Crawl4AI comes in! Crawl4AI is an open source web crawling framework specifically designed for scraping websites and formatting the output in the BEST possible way for an LLM to

understand. The best part is it solves a LOT of problems we typically have with systems that crawl websites - usually they are slow, resource intensive, and complicated. But Crawl4AI is VERY fast, intuitive, easy to set up, and extremely memory efficient.

In this video, I show you how to use Crawl4AI to super easily crawl websites for LLMs in just seconds, and at the end I even show you a RAG AI agent I've built to be a "Pydantic AI" framework expert using Crawl4AI to build the knowledgebase. And you could really take this and use it for any website you want. Next video I'll do a deep dive into this agent!

~~~~~

Register now for the oTTomator AI Agent Hackathon with a \$6,000 prize pool!

Sundays and Wednesdays are for everything AI, focusing on providing insane and practical educational value. I will also post sometimes on Fridays at 7:00 PM CDT - specifically for platform showcases - sometimes sponsored, always creative in approach!

## **Video 21: n8n + Crawl4AI - Scrape ANY Website in Minutes with NO Code**

Video URL: [https://www.youtube.com/watch?v=c5dw\\_jsGNBk](https://www.youtube.com/watch?v=c5dw_jsGNBk)

Description:

Last week I introduced you to Crawl4AI - an open source and LLM friendly web scraper that makes it super easy to crawl any website and format it for a RAG knowledgebase for your AI agent. I even created a full AI agent as a follow up video that leverages this knowledgebase I created with Crawl4AI. A TON of you asked me to do the same thing in n8n, so here it is!

In this video I show you exactly how to deploy Crawl4AI super easily with Docker and leverage it within your n8n workflows to crawl website pages in seconds. We even build a simple AI agent that uses this knowledgebase to become an expert at the documentation for Pydantic AI - my favorite AI Agent framework right now!

There are a lot of ways to crawl websites, but many of them are expensive, slow, and/or difficult to work with. Crawl4AI on the other hand is easy to use, fast, and completely free since it is open source. The only thing you have to pay for is the machine in the cloud to run your crawler, and that's only if you aren't just running it on your computer!

~~~~~  
Check out TEN Agent now (completely open source!) and see how easy it is to get started building voice AI agents for free:

GitHub repo:

<https://github.com/TEN-framework/TEN-Agent>

Playground:

<https://agent.theten.ai/>

If you aren't aware, voice agents are one of the biggest needs businesses have right now, so if you're a developer looking to make money with AI, tools like TEN Agent are definitely worth learning and using!

~~~~~  
Here is the n8n workflow I covered in this video! It's in a folder along with all the other Crawl4AI stuff I've done on my channel recently with Python.

[https://github.com/coleam00/ottomator-agents/blob/main/crawl4AI-agent/n8n-version/Crawl4AI\\_Agent.json](https://github.com/coleam00/ottomator-agents/blob/main/crawl4AI-agent/n8n-version/Crawl4AI_Agent.json)

## Video 26: The Future of RAG is Agentic - Learn this Strategy NOW

Video URL: [https://www.youtube.com/watch?v=\\_R-ff4ZMLC8](https://www.youtube.com/watch?v=_R-ff4ZMLC8)

Description:

Buckle up - HUGE amount of value in this video for building RAG AI Agents that actually work. Honestly I could have made this video into an entire course but I wanted to give it away to you for free. :)

RAG is the most common approach for providing external knowledge to an LLM. The problem is, once you have your own curated data in a vector database as a knowledgebase for your LLM, often times these RAG setups can be very underwhelming. The wrong text is returned from the search, the LLM ignores the context provided, etc. The logic of RAG makes sense in your head but it just doesn't work in

practice.

And you certainly aren't alone! That's why there is a TON of research in the industry for how to essentially just do RAG better. There are a lot of strategies out there, but out of all the ones I've researched and tried myself, agentic RAG is the most obvious, works the best, and is what I'm going to introduce you to and show you exactly how to implement in this video.

In the last video on my channel, I showed you how to use Crawl4AI, an open source LLM-friendly web crawler, to scrape entire websites for RAG SUPER fast. We used the entire documentation for my favorite agent framework, Pydantic AI, as an example. Now we're taking this MUCH further by:

1. Putting all the documentation in a database for RAG
2. Creating an agentic RAG agent to use this knowledgebase with Pydantic AI
3. Building a frontend to chat with our agent using Streamlit

I'll explain exactly what Agentic RAG is, what makes it so powerful, and then this AI agent we'll build in the video will be the perfect example!

~~~~~  
Try GPUStack for free - it's open source and you can find their GitHub repo here:

<https://github.com/gpustack/gpustack>

I don't have the pleasure of being sponsored by open source projects often, so this was a treat! It's the best GPU cluster manager for LLM inference that I have seen and a very honest recommendation!

Here is their main site as well:

<https://gpustack.ai/>

Key features of GPUStack:

1. Heterogeneous GPU cluster management including Linux, Mac and Windows with Nvidia, and Apple Silicon. AMD coming soon!
2. Distributed inference with smart scheduling: GPUStack can distribute a big model to multiple heterogeneous workers. Automatically calculates and decide whether distributed inference is required and configure it automatically.
3. Rich model types support: GPUStack supports LLM, VLM, Image Generation, Embedding, Rerank, TTS&STT; models.

~~~~~

## Video 28: Introducing Archon - an AI Agent that BUILDS AI Agents

Video URL: <https://www.youtube.com/watch?v=GjR5UsVGE60>

Description:

Archon is the world's first "Agenteer" - an AI agent that literally creates other AI agents from scratch! All with pure code so you aren't tied to any platform, and it's a specialized agent trained for specific frameworks through documentation and advanced knowledge retrieval practices so you'll get way better results than the generalist AI coding assistants like Windsurf, Cursor, or Cline.

Archon is in it's infancy, but I've got huge plans for it and I want to bring you along for the ride since it's fully open source! I'm purposefully releasing it in iterations as I develop it instead of releasing the final product at the end because:

1. I want to use it as a tool to teach you how to build super powerful AI agents with Pydantic AI and LangGraph (other frameworks in the future too)
2. I'm "building Archon in public" so you can see my process of building an advanced AI agent from inception all the way to something insanely powerful

3. It allows for people like you to contribute since I really want Archon to be a community driven project!  
It's a BIG undertaking so I'm looking to you for help!  
In this video, I show you what Archon is, why it's so powerful, and all the big plans I have to create it into a monster of an AI agent.

~~~~~  
Check out Archon on GitHub, try it yourself, and give the repo a star!

Video 35: Make vs n8n—The Wrong Choice Will Cost You

Video URL: <https://www.youtube.com/watch?v=L4uST6vOTac>

Description:

■ AI automation HOW-TOs + Community →

<https://www.skool.com/no-code-architects>

What if you knew exactly which automation platform to use? Make or N8N? so you didn't waste tons of time learning the wrong platform?

I've been using automation to generate \$100K per month consistently, so today I'm going to condense what I've learned teaching 100s of beginning automators and 100s of business owners to help you pick the right automation platform.

But I'm not just going to just explain the differences, I'll go further and explain why it matters to you specifically. Whether you're a beginner or intermediate automation expert, or a business owner looking for the right solution, today you're going to learn how to pick the best automation platform for you.

By the end of this video you'll know the important differences between make and n8n plus which one is best for you.

Video 38: I Built His \$1M/ a Month AI App Idea (STEP BY STEP)

Video URL: <https://www.youtube.com/watch?v=takY0o24F1Y>

Description:

I Built His \$1M/ a Month AI App Idea (STEP BY STEP)

Tool I used:

<https://mikeyno-code.com/Replit>

(get \$10 credits)

Join my exclusive newsletter:

<https://mikeyno-code.com/newsletter>

Greg Isenberg brainstormed with a 24 year old that build 3 viral million dollar apps: Plug ai makes \$2,5 million a year , Umax makes \$5 million a year, and about 6 months ago he launched Cal AI that is already doing \$10 million a year.

Every time he uses the same formula for creating viral apps. In the brainstorm session he mentioned an \$1M/ a month AI App idea that we are going to build in this video. I will show you step by step how to build an app without coding a single line of code from scratch!

We will implement Blake's formula to make the app go viral. And let me tell you this, this is not just any video, besides showing you how to build the entire app. I'm also going to be showing you how to connect it to a database, create user authentication, and even connect it to Stripe so you can start right away with making money.

But the most important factor of creating a viral app is implementing AI features within the app. I will show you how to do this in a bit.

Now, what is the \$1M/ a month App idea that Blake shared?

The concept is an AI-powered journaling app, similar to ChatGPT, but with the ability to analyze journal entries and extract valuable insights into productivity, emotional health, and relationships.

So in this video, I'll show you exactly how to build this app, step by step, using Replit as my development platform and highlighting the key features that could make this, the "NEXT VIRAL AI APP!"

- how to build app with ai
