

This Free AI Tool Will Create Beautiful Graphics in Seconds

<https://www.youtube.com/watch?v=wBpHQgMrSnE>

I'm going to turn this text into a complete visual story in less than five seconds check this out so what I have here is a post that I recently put into my AI Playbook premium School Community where I was walking through step by step how I think through creating an AI automation that solves an actual business problem for my business or for a client's business so the first thing I'm going to do is I'm going to copy all this text I'm going to go over into napkin AI napkin. I'm going to paste all of that text I'm going to highlight all the text click the little lightning bolt and literally within a matter of seconds I have visual representations of this text and I've got a lot of different styles to choose from I've got this ladder style I've got the circle with the arrows I've got the process funnel I mean I can scroll down here I've got all these different visualizations that have been designed for me that represent my steps here how cool is this so let's just say I like this style here I can click into Styles and I can click on any one that I like so let's just choose this one here and so now I've got this amazing graphic that represents my nine steps that makes it even more powerful to teach this concept right now that I've got this I can go in here and I can change the text I can change the alignment I can change the font the colors I can put boxes or bubbles around these things I can customize this image however I see fit I can also if I want to come down here and input an image to go along with the graphic representation that it is just generated like how many times have you wished it were easier to explain a complex topic to a potential client or somebody on your team or to a colleague or whatever and by the way I am not affiliated with napkin AI in any way I'm not being compensated I just discovered this tool recently and I was blown away so I had to share it with you with napkin you can create visuals for your webinar slides your presentations you can put these Graphics into your email newsletter social media you can do sales funnel diagrams you can add images to your landing pages you can create infographics you can visually represent your blog post you can put them in Pitch decks onboarding material for your team or clients there's a number of things you can do with this and when you're done with your image you can just highlight it here you can copy and paste it and put it into whatever slide or whatever it is that you want or you can simply download it so let's take a step back and I'll take you through some of the things step by step that you can do here in napkin it all starts with the new napkin click the white button you're going to get two different options here a draft with AI and blank napkin which is actually what you see here on the screen and what we just did so let's just do the draft with AI part check out what this can do let's just say that I want to rethink the onboarding flow for my school community so I can say onboarding flow for online membership and what this is going to do it's not going to create a graphic for you right away it's actually similar to perplexity AI if you've used perplexity I'm putting a topic in and now it's going to write out an onboarding flow for the online membership remember all I typed in was onboarding flow for online membership and it has given me what seven steps with a conclusion and it has come up with the flow all by itself I was very vague in the prompt that I gave it but I think this is really good now I've got different options and I think this is such a cool feature here in napkin I can highlight the entire document here and I can

come down here to the little lightning bolt and I can create a visual representation of all of these steps or if I wanted to I can create visual representations of each of these steps so I could just start with step one and create a graphic just of the first step here so again highlight just what I want to create a graphic of click the little lightning bolt they call it a spark and it is literally created a visual representation of Step number one within half a second so again I can scroll through here and it Maps it all out just like I showed you before I can change this is kind of cool I can change this in any way so I if I like this one I can click this and I can say oh I like this one the best I'm going to click here and here is my graphic I can keep coming down here and do that for each of the steps so now not only am I writing out what the first piece of the onboarding flow would be but now it also has a graphic representation of it so let's go back here and try what it would look like to highlight all of this now I want to create a visual representation of that let's see what it does it takes it a little bit longer right but what that was seconds that it did that in and now it's taking all seven of those steps and creating a graphic of those steps I could do this one here this one here is kind of weird again the steps like we saw earlier we can do this one as you can see here it kind of repeats the same types of Graphics that it has for what you put in in but let's just say again let's just say I like this one and I want to go with this I click on this I can make this bigger I can customize this in any way but how cool is that that not only did I get a complete onboarding flow that it made up itself with AI but also I turned it into a graphic representation of that onboarding flow so how cool would that be for me to take this and give give it to somebody on my team and say this is what I want to make sure it's happening for the school Community here are the steps here is a visual representation of it by the way if you are an online business owner and you're looking to discover how you can use AI to work a lot less in your business and profit more then I want to invite you to check out my school Community which I'll link to in the description below in the AI Playbook premium Community we're all about AI automations strategies and Tools Plus expert online business coaching by me I've been running my online business now for years done multiple seven figures over those years and this is your ultimate Community for AI powered business growth along with business coaching this is the only community that you're going to find that combines AI strategy coaching done for you AI automations as well as business coaching with live calls and within our community and we've got an amazing community of online business owners check out if you're interested the link is in the description below now let's go create a new diagram so we're going to come back up here to new napkin but this time we're going to use a blank napkin and I want to create a visual story of how to create SEO friendly content with AI the right way this is something I also recently posted in my school community so I'm going to put the five steps that I shared with them right here and again I want to create a visual story A visual representation of these five steps I'm I'm going to call it how to create SEO friendly content with AI uh the right way so now I'm going to again highlight everything click on the lightning bolt and let's see what it comes up with all right here are my Graphics that I just created in a matter of seconds so this one's okay this one I kind of like this one better I really like this one here here's the SEO friendly funnel I like this one so far the best but I can keep scrolling through here this one's pretty cool it's pretty basic but this is cool pros and cons I mean it just generated this all by itself so let's just do this one here I'm going to click on the Styles I'm going to go with this one and now again I have a visual representation of these five steps that I can share also in my school Community also in an email also in a blog post or a webinar slide or a presentation that I'm giving

whatever it might be again I did this in a matter of seconds and I have zero design skills all right let's do another one where we're going to start with a blank napkin here and let's call it a new higher onboarding flow and sequence first days actually so again I'm going to highlight it I'm going to click on the lightning bolt let's see what it comes up with all right and here are the images that it just created for this so so again you can see here that they're all very similar looking throughout the different use cases that you're putting in here so with this one here we've got kind of a horizontal graphic we've got the pyramid here this one doesn't really do a whole lot with that one this one is represented with the big circle this one not super helpful again not very detailed on that one this is pretty good here with the steps again the onboarding funnel okay I like this one this is pretty interesting where it did new higher onboarding it went through the pros and cons and now I could look at this in a different way it actually doesn't do a whole lot it just changes the font so let's just say that I don't want to use that one this one here okay and this one was just a simple graphic that it created so so pretty good overall let's try this using the AI portion of it let's go back up to new napkin draft with AI let's put the same thing here here and now again just like as you would see in perplexity AI it's going to go through and build you an onboarding timeline and give you ideas check this out it's broken out by weeks and months so let's just say that again let's turn this whole thing into an image highlight everything I'm going to click the lightning bolt let's see what it comes up with so it came up with similar things but I actually like this a lot better because it's more thorough and it's not surprising because it wrote all of these things out right so you got this one here we've got this one that doesn't go into much detail this one's pretty good because it's a more linear top to bottom sort of timeline it's got this one here this one's okay I think so this is one that I think is pretty cool however you'd want to do a lot of customization with this one here where it's week one what are they doing week two through four what are they doing so this one pretty cool this one you know so it's okay and then here's the last one that it did so again there's some really good ones in here and other ones that I don't think are amazing but again let's just say I want to do this one and I want to go through pick the one that I like the best let's just say I like this one here and again I can go through and edit and customiz one thing to be aware of is napkin is currently in beta at time recording this video and so it's free it's free to use so if you go to their website go on the pricing section you can choose a plan and they say that keep generating your visuals it's free for now we won't lock your data behind a pay wall and we'll offer a deal for our longtime followers so if you're going to be using napkin on a regular basis I would get started with one of these options here and it looks like that you'll get preferred pricing and maybe I don't know early access to different things or what have you now something to remember and this goes for all AI tools right I would caution against inputting any proprietary or sensitive information into napkin to create visual Graphics from because after all again it is an AI model and we want to be really cautious of sharing that type of information all right so there's napkin Ai No graphic design skills required now one thing that I do wish it had more of and again I'm sure this is going to roll out really really quickly it is after all still in beta and as I sh do it's free right now I wish it had more of the graphic templates out of the templates that it gives you for each thing that it generates I would say there's a small handful of them that are actually useful for the text that is being input there or being generated again I think that'll change and they'll roll out new templates here really really quickly but I do think that's that's one limitation where we are in the beta right now but mindblowing tool here and I think this is change in the game of how we can tell better stories

for our businesses both in text and in visual representation if you like this video please consider subscribing to the channel here give it a like and if you have any comments or questions please leave them in the comments below I'll see you in the next video
