

Top 5 AI Website Builders (No Coding Required)

https://www.youtube.com/watch?v=uHg_-46MVOo

I've spent the past month playing around with more than different AI website Builders so that you don't have to and so today I'm going to be breaking down my top six that don't require any coding skills to build beautiful websites like these welcome back to the studio my friends my goal for you with this video is to not only select the tool that you want to build your website with but also to build a website leveraging that tool in front of you because I want this to be a fair comparison I'm going to be using the same prompt or the same business idea to build out these websites throughout all of the website Builders so what am I going to build well inspired by a trip that I took to Cuba where I saw that they had beautiful cars in Havana specifically vintage ones I've decided to build a website for a car dealership specialized in vintage cars the name of this business is going to be Havana Classics and it's going to be based right here in Los Angeles now we have lots to cover my friends so let's jump in okay so this first tool is actually the youngest tool I'll be talking about today it was founded in so just a couple years ago but it's already getting some pretty good recognition in the web design world name of this tool is Dora now this tool was created by designers who were trying to make it easier to create animated and 3D websites specifically so let's jump in if you come to their website as you can see here they basically have a prompt you can just enter the prompt if you enter the prompt they're going to ask you to log in so when you log in you get some free credits and you can basically test out their website builder leveraging AI so I'm going to jump here I'm going to drop my prompt and let's just see what it generates so here first of all it asks me the prompt but then it also asks me the style and you can actually choose one of the presets right here or you can just go with custom and you can actually create your own preset now for this one I'm basically going to use the preset that I already had right I'll just grab this I'll put it here and then we are going to generate these four previews the first thing it does is that it generates a couple of different looks for me let's say that I like this second one I'm going to ask it to generate awesome so before doing anything here I'm actually going to just showcase it so we're going to preview what the website looks like without touching it at all wow this looks actually pretty cool it's created a section around home about inventory contact and appointments which is great because I told that its goal was to book appointments for showings and it's really just showcasing a bunch of beautiful cars it's really understood what uh we were trying to do here and then when I come back into the editor here we can start adapting things from here right so we can check out different Design Elements and events that we want to happen like interactions for buttons for example but generally speaking Yeah I think it's done a pretty good job here and from here what we could do is we could start basically if we wanted to adapt an entire section we could ask AI to kind of change that specific section we could also have it regenerate the entire website if we're not happy with this one you'll also find here on the left hand side that you also have the version for mobile so you could also adapt this mobile version but yeah look at the quality of the cars that it's created it's really understood the prompt it also understood because I put in the prompt that I wanted to book calls for me right I love even the copyrighting unparallel craftsmanship that feels kind of

elevated which is kind of what we were going for in The Prompt now one thing that I would say about using Dora is that it is built for people who already kind of have some experience in web uh building and so it might not be the best tool for you to use if you're a complete beginner now of course this is a first version and for most people this won't be that accessible because you have to learn the platform and that will take a couple of months to get good at especially if you're trying to build really crazy websites and if that's the case for you my friends this next tool might be exactly what you're looking for now the second tool has been around since so they have a lot of experience in the website building realm it was founded by a couple of entrepreneurs in Lithuania and it's been growing dramatically since and it's called hostinger by the way in all transparency I out to them when I wanted to make this video cuz I love what they do and they accepted to sponsor this video so thanks so much for that so now for you you can go to hostinger.

com we are no code and at the checkout you can add the coupon we are no code and you can get an even cheaper price if that's humanly possible but one thing that's great about these more mature platforms is that they've been building out AI before AI was cool and as you can see from their website they are incredibly competitive when it comes to price so this is a very good tool if you're looking to build out your first website and let me show you how it works when you log in you'll see here that you have some setup steps this is going to bring you through the onboarding and it's super practical I'm going to click on that in this case we're going to create a website next we're going to do so with hostinger here we're going to put in the domain that we want to use so if you have one you can insert it and connect it if you don't then you can actually get one here so I'm going to type in Havana Classics LA and right here you're going to see that they're actually giving me this domain for free which is amazing and after putting in my contact details I can finish the registration right here and now my friends it's time to start building this website with AI and the first thing we're going to do here is start creating with a AI enter the brand name the name of it is Havana Classics description I'm just going to put my prompt here awesome create website okay and this is what I gave us vintage cars await you I like it looks really high-end I see that I've misspelled Classics here inside of uh the the tool so obviously it's not giving me oh really cool look at that a really beautiful vintage image as I asked for discover vintage Elegance at Havana Classics nice even corrected Classics on this one vintage car showcase okay there's maybe uh two better examples to show here but this is really cool test drive experience expert consultation personalized Services very nice I also like the colors they feel very vintage and there's some pretty Showcases of cars so it's understood look at that look at this really nice kind of like detail shot of the Interiors this is very decent I'm very happy with this let's go ahead and edit so what you'll notice here is a very easy user experience that's what's really great about this so if you have absolutely no experience this will really be just great for you so let's say that there's a specific thing that you don't like like the copy you can just describe what you want and it will adapt it if you want to change an image you can easily go here and change the image if you just want to switch one of these you can just go in generate image a Havana vintage car driving make it red let's see what it gives us o la la yes please I'll get two of these can reshape it as well if I want to and I can basically do that for all of the changes that I want to do and when I say they're advanced in their AI capabilities I mean it you can can do things like obviously AI writer and the AI page generator but also section generator so if you want to change one of these entire sections and just do it with like prompts you could very easily AI

blog generator heat Maps where you can see where people are going to be looking when I activate this as you can see here it's going to show us the places that people are reading on this specific section and they actually are going to show us this throughout the entire website now the reason why this is important is because most people are just going to scan your website so by knowing where they're scanning you can really see the parts you need to get right to communicate your message so the image and this title is super important then you scroll down the uh middle image and this are the most important then we want to have a solid image here as well and so in this way we can basically attend to most people's needs and it seems like they're clicking on the testimonial a lot and here they're coming into the footer and checking out social media so this allows us to create a better page that is optimized and that basically gets more conversion now another cool AI feature is the SEO assistant this allows us to to be more searchable so we can turn up on top on the search results for specific keywords so here for example I can go ahead and generate new SEO info put in basically the prompt that I have next step I select the keywords that I want this website to rank for so test drive vintage cars uh vintage cars Classic Automobiles and just like that it's going to basically show me the search results and it's going to also have the SEO title and The Meta description and now you can do this for each one of the sections you have here and you're good to go so it's really quick and easy as you can see it's really user friendly So This is highly recommended for people who don't have that much experience who want something super classy done quickly and really fully with AI but if you're looking for something more complex that's more geared towards really web designers then you're going to like these next tools that I'm about to talk about this my friends is a powerful no code Builder called webflow and when you combine this tool with this tool called reloom we start making magic so let me show you and blow your mind with these two tools now I know that these are two tools and using them together so technically it's cheating but I wanted to include them because I think you're going to like it the first thing I'll do in reloom is to come here and I'm going to input The Prompt that we have now in just a couple seconds it creates a Sit map basically a structure of the website and I can adapt anything here I can delete sections but as soon as I click on this up here wireframe look at what it's going to do boom it's going to generate an entire website wireframe and if we zoom in a little bit further you can see that it's pretty well done even more impressive here is that if you go to the top here and once you're ready you can click here and you can copy this to web flow now to be clear you have to be on the paid plan to be able to do this but then you can go and clone a style guide and now once we're in this new project inside reum I'm basically going to delete everything inside of it boom and I can come here and just click on body and click on V which is just paste and just like that it's created the entire website and this is actually a full website with all of the code behind it as well and now all we got to do is to adapt it uh to our needs and just to show you that this is real this is gener at as you can see here all of the code behind this website so it's super cool and the best thing is that if you want to for example change the buttons you can go inside the style guide and you can change the buttons once and it'll change it in the entire website now a little heads up with this approach web flow definitely takes a couple of months to start getting good at you can do some simple things in just a couple of days maybe weeks but then when we start talking about deeper builds it's going to be more complex to build a project inside of webflow so this would be a great project for people who have already built a couple of websites and now are looking to really take it to the next level and by the way if you find all this stuff cool like And subscribe to

the channel we have more tools to cover so let's get to the next one this tool my friends is quite literally the elephant in the room it is Wix now this company started in they even have a product called Wix ADI which basically was AI ahead of its time let's jump into this let's create this website leveraging AI so we'll come to the website we'll click on create with AI it's going to basically have a sort of chat navigation so it's like you chat with this specific AI so it's like let's get started first tell me about the site so we're going to go ahead and paste our prompt right here next what specific features would you like to have on your site to showcase the vintage cars this is interesting I'll say a slider please what's the main goal you want to achieve with this website book appointments for test drives do you have any other specific goals I'll just put more sales let's go ahead and generate this site pretty cool let's starting to build it out in front of me here okay they have some light animations that's pretty cool it seems like there's maybe a little bit missing here here at the top I could say like make it a little different or you could just regenerate the whole site so let me just regenerate the whole site once and see what it does okay it's asking me to upgrade but this looks really nice right I probably would change the colors slightly I like that animation when you scroll down that's cool rare finds okay about Havana Classics so here if I go into design I can basically change the theme if I want to let's go ahead and check out different options I kind of like this okay let's keep this as the theme and and uh the interface as you see is very easy to use which is very practical um and generally speaking I think it's done a good job here with AI it's generated for the most part some pretty good stuff uh if I want to change anything it's uh really drag and drop so for example if I want to change the background image here I can go ahead and change it and uh it also lets you with AI create images if I go here what you're going to see is that we have some additional assistant as well that we can leverage this is very interesting text Creator section generator and theme assistant so all in all a pretty good output by the way if you have an idea for an app or a business that you'd like to launch but you don't know how to code and you don't have experience then I highly encourage you to check out our course we have a full bundle that breaks down every step to launch a business from scratch that includes building a website launching your first web app and also the steps to test and validate and go after customers you can check out the link in the description or go to our website at we noco.

com let's get back to it this next platform was launched in and it was built by people who were very passionate about WordPress the name of this tool is web and now let's go check out their AI website builder so once you log in I can come here and create a new website with AI let's just click on that it's going to ask me the name of the site we're going to call it Havana Classics okay so now it's setting up the hosting it's installing WordPress and it is going to finalize now it brings us here we're going to go ahead and click on generate with AI so what kind of a website do you want to create I want to create an information website let's go what type of website are you creating car dealership then here I'm going to input The Prompt that we have so what's kind of cool here that I'm seeing is that it's creating a site map as well so it's creating something similarly to what we saw inside of reloom inside of this website tool looks pretty good I think the sections below look pretty good as well so I'm just going to go ahead and generate it now it's going to ask me for uh how the look and feel might look let's stick with this one pretty simple classic I kind of like it so let's go with that generate okay cool little animation I like this Havana Classics has created like a really basic logo for me let's go ahead and scroll down cool it's brought up some pretty cool cars AI generated I think the quality of the AI generation could be a little better but hey I'm going to replace any way all of

these images this one looks great yeah and I like the little animation it did there exclusive Services test drives car sourcing it's built out a full blog this is also something where it seems like it's going to be very easy now here as I can see here on the left hand style and the cool thing here is that I can kind of change all these things rewrite with AI so basically this is very drag and drop so it seems like the ease of use is going to be very simple to adapt it seems like there's um a couple of images that are being recommended here so if I just want to like switch them out I can just switch them out for others on the top left here there is a uh a section Creator so we can basically adapt or generate sections that we want as you can see here it's sections that were inside of the S map so that's super cool and I must say that I'm pretty impressed with this platform so it's kind of a good balance between like ease of use uh and also having some pretty powerful AI and now let's do a very quick comparison of the pricing between these different platforms so you can get an idea of which one might fit your budget as well so the first platform is Dora if we check out their basic plan it's \$14 a month and you get credits uh per month I think that if you wanted to actually run a serious website off of this you'd probably want to go for the \$25 a month plan right out of the gate of course if you're just building a simple website \$14 a month will work this is one that charges by credits because you're going to be using a lot of AI uh whereas other platforms don't necessarily hostinger this is difficult to beat honestly it is incredibly cheap I would definitely consider going for the most popular plan and by the way you have a discount just because there are sponsors today so here you are in a 4-year plan for \$3.

but basically if you have a small medium business and you're like you know what I need a website I need it to look good and for it to be manageable um you know you're probably not going to want to change providers every single month uh and this is actually incredibly cheap and here you can see that you get months for free in case you're not satisfied with uh the product and it comes with additional things so these larger players basically they have first of all marketing Integrations they'll have a bunch of different things included inside of this if you're trying to do e-commerce there's uh zero transaction fees so yeah the pricing is very difficult to match okay so now we're in web flow web flow as I said you could just have this separately you don't need use reloom but reloom allows you to leverage a lot of the AI that we showcase today so if you were to combo both of these it would be a little more expensive that's for sure and that would come obviously with um with an upside on the kind of like uh design uh customiz abilities here \$14 a month I would most likely expect it for to be like a month uh this is more for like web designers I would say um reloom is going to cost us um \$18 a month um or bucks a month for the pro version Wix allows you to obviously create websites for free most of these platforms also allow you to create websites for free but if you want to connect it to a custom domain you're going to have to upgrade to one of the premium plans I would say that it's a little bit on the expensive side of course there's lots of additional things that you can see here like site analytics it's uh not cheap but it's not too expensive when you consider the kind of additional things that you could have as part of this deal as well and then web over here it is actually relatively cheap right uh I think it's because right now we're seeing some kind of an offer but \$6 a month for the personal PR plan let's say that it's a month that's still pretty reasonable uh unlimited Pages it seems like it also includes quite a few different uh things as part of that so it seems like here there are some additional add-ons as well if we need additional uh storage if we need um you know additional websites I guess now building a website is absolutely awesome but you know what's better building a profitable business so

if you want to see how I built a profitable software business without writing a single line of code leveraging no code in AI then check out this video my friends because it'll break down every single step subscribe to the channel let's go
