

Top 7 Prompt Libraries for Unlimited Prompts

<https://www.youtube.com/watch?v=q1qav7x32yE>

in today's video I want to share with you seven different prompt libraries that I found really really useful and if you're really busy these should give you some really great free prompts that you could save to a Notes app and constantly use across chat GPT or Claud or whatever large language model you like to use this video is brought to you by nid AI more on that in a bit okay the very first one I want to show you is from Google and I'll link this one in the description along with the others this prompt Gallery right here is technically made for Developers but I found it very useful as a business owner too so I'll just go down to this one right here marketing writer just to show you an example of what this is capable of now this takes you inside of their own platform this is called Google AI studio now here's the prompt it's very simple it just says give an image of a product and the target audience and write an engaging marketing description but why I wanted to show you this first is because this one is also a place where you could get an output from The Prompt and not use any other model that's available right now so it's really simple right here you input an image and you could do that right up here you could just upload your image from Google Drive or upload it directly here and they have some samples as a test and then just one word target audience and then if you just run this right here it's going to give you that marketing description so you technically you don't need to save this prompt I like this layout better for this very specific use case and ton of the Google AI Studio prompt Library prompts are useful right right inside of here and the model that is available and used right here is called Gemini 1.

flash this also runs Google Gemini's website but you could also use Gemini 1. Pro which is a better model so very useful prompt Library if I go back to the prompt library page you could see they have it for all kinds of different use cases and each one will take you to a page where you'll see the actual prompt over here or you could combine it here with system instructions so on top you could type in your tone and style choose a model this time it's using the input of an image and the actual prompt itself or you could just save it and use it in any other chatbot in this format okay this next Library I wanted to show you this is hero.

page is the URL and they have ton of really useful prompts here a lot more practical than some of the prompts in the other platform especially for business owners marketers so here's AI prompts for Content creation AI prompts for design and media let's try this one and it takes you right to this page where you could see the prompts but I like to run the prompt because a lot of the prompts have Place holders right here so you could type in words for the placeholder and then replace it right over here instead of just copying it with the placeholder so for example it says write a comprehensive analysis of the most repetitive task encountered by let's say these are for thumbnail designers graphic designers that focus on thumbnail creation and it says in their creative process focusing on finding images image editing and ideation so you could put those whatever you want here or just copy it with the placeholder if you're just going to save this as a prompt in this case this is the prompt I want I could copy it and save it to my notes or I could open up chat GPT or whatever chat bot I want to use here and then type in that prompt to see what kind of result I get and then have chat GPT refine this a little

bit more now this is not just prompts for large language models like chat GPT this has different things for Mid Journey For example too so you could jump into that page and take all kinds of different cool mid Journey prompts like this and then here's one for example pretty detailed prompts to generate images inside of mid Journey or other text to image platforms as well now let me show you this platform here that I recently partnered with I covered them for the last year or two on this channel as well but they recently had a big upgrade this is called mid AI 2.

and if you've never used this before it simply takes any text prompt and turns it into an entire video if you just press generate a video now after a few seconds it analyzes your prompt that was a pretty straightforward prompt so it's going to ask me my audience now for platform you can make a regular YouTube video for the sake of time I'll do YouTube shorts after about a minute I got a full video that's about a minute long exposing the glory and downfall of History's mightiest Empire let's dive into the Roman Empire now you could also use this box right here to make edits with a text prompt so you just type in a new text prompt over here and press generate one of the things it could do is it could translate your video so I could say translate from English to French and in just a few seconds complete French version of that same video you could also clone your own voice and use your own voice for the voiceover instead of the ones that it generates for you just upload a sample seconds and here's a generated video with my own clone voice as the Western Roman Empire fell to Barbarian invasions now when you're done editing or if you're just happy with the result right off the first prompt you could just go ahead and press download and then you want to obviously remove the water mark so they have a free version but you could get a version that removes the watermark for you and lets you upgrade in higher quality right over here and all the captions and everything is going to be included as well so that one is just \$25 a month and just press continue right over here and in a few seconds there is the HD quality video downloaded right to my computer that I could post online now I'll put a QR code here on screen if you want to try in video AI for yourself and I'll put a link in the description as well the next prompt library I wanted to show you is called snack prompt.

some of these are paid again I don't recommend you pay for a prompt a lot of the free ones are very good as well so a lot of times I just go ahead and look for non-premium prompts meaning the free ones over here and let me just go ahead and see this one one Click Book Creator and then they have a rating which I really like so it looks like wow this one only has five star ratings now I just have to say show The Prompt okay this looks like a pretty comprehensive prompt here so you just type in your book topic over here and it's going to help you generate different chapters thousand words per topic which I think we're going to hit a limitation on how long these are going to be let's go to chat GPT okay here's the output from The Prompt so it created a book title this one I wrote about generative was my topic here's all the chapters this is a heading for the beginning of the book here and let's see how it deals with it when it hits his limit okay so it says let me know when you're ready to get to chapter one so it will give you a follow up because you obviously can't output whatever 100,000 words here or 10,000 words here in a single prompt so it's going to give you a thousand words it's going to pause right here it's going to ask when you're ready to move on to the next thousand words so pretty good prompt here and that was just one of the first ones I've tested out I'll also show you this one this is technically not on my list because this one is pretty simple and this is the very first prompt library that was released directly from open AI and they had this website

called platform.

open. com mainly for developers to build apps using AI so these were a lot of times more system based prompts but I did find some of these useful as well so when I went to this one for example single page website Creator this is the user prompt so this is the only portion you would need pretty straightforward prompts very simple not like the ones I'm showing you so far but I did want to throw that in the mix since this was the very first prompt Library I ever used it has about different prompts here now anthropic from Claude also released their own prompt Library very similar to the chat GPT and open AI one I just shown you and this one is also pretty useful here so let me show you an example website wizard let's see what that prompt looks like these also have system prompts so if you're building for example custom gpts which I've covered in different videos you could then use the system prompt here which is something you put in the back end of your chatbot and then the user prompt is something you type in inside of the chat as your prompt and I found these to be a lot more comprehensive than anything you get from the open AI one so I really like this Claude prompt library now this next one is really for Creative people or marketers that need any type of image created this one lets you search for prompts related to the top image platforms like flux stable diffusion mid Journey they do have chat GPT prompts obviously dolly is inside of chat GPT for image creation and I found these pretty useful as well a lot of these actually show you the output so you could go ahead and copy the prompt from here this is for version six of mid Journey For example with some parameters and you could just copy and create those inside a mid Journey yourself and you could also search a lot of times if I'm looking for replicating a stock photo I may search here to see if they have something so this has come in handy when I can't quite get what I'm looking for and maybe someone else has created something useful that I could just copy and paste now this next one is on github.

com again I'll link this below this is something called role prompting so English translator and improver I want you to act as an English translator so typically this is a very basic prompting technique but you start your prompts this way but as you could see they're pretty in depth over here and he has ton of different prompt examples for all kinds of different role prompting travel guide I want you to act as a travel guide okay and you could see this is a huge huge page I found this one really useful especially when I was new to prompting I really found role prompting to give me better results now this next one is from Google cloud and it's called vertex AI they have this entire prompt Gallery as well very powerful prompt galy here's advertising campaign right here I'll jump into it and the prompts are a lot more professional because they're really designed for developers but as users of again chat GPT and Claud we could simply take any one of these prompts exactly as is but you could see these have these hashtags and these Stars these are delimiters to get your prompt to know what the most important parts of your prompts are now you could also improve this prompt by by giving an example so if you tell it what the input is and what your ideal output is it will add an example to the actual prompt so then chat GPT knows hey this is my ideal input and output when the users input this this is what I want as an output and these examples let these models actually give you a far better result than if you don't use an example so I really like this one it looks a lot more complicated than the other platforms that I've shown you so I've saved it towards the end here but I some of the posts that you get this is just a simple post generator very simple prompt to get started but you could also insert media here so this one is just trying to work off an image obviously this is inside of the Google Cloud platform but you could take any of these

ideas and use any other model to get exactly what you're looking for marketing content generator okay here's another wow this one's a pretty good prompt as well looks pretty detailed it has rules okay and then you could again add your own examples you could insert media you could even connect an account here and run some of these right over here again this is from Google so you have the Gemini models but I know a lot of people prefer to use chat GPT and Claude so I would just copy and paste these and save it on a Notes app and then use them from there now when it comes to the new reasoning model the model from chat GPT that works a little bit differently so you're not going to get good results using these type of prompts for that so I'm making a video showing you exactly how to prompt that because that takes a whole different prompting technique all these prompts that I've shown you so far are great for GPT they're great for Gemini they're great for Claude but the reasoning model works a bit differently so stay tuned for that video thanks for watching I will see you next time
