8 Mind-Blowing AI Tools You Probably Didn't Know Existed!

in this video you're going to discover eight gamechanging AI tools that will actually help shortcut tasks you've probably been spending hours doing such as making presentations documents videos designing websites and researching and planning knowing what these eight AI tools are will put you in front of 99. 9% of the population and you'll have a true unfair advantage and you'll be glad to know that none of the eight tools I'm going to mention in this video is chat gbt with that said let's get on to the first tool all right this first tool is called gamma it's going to completely blow your mind and change the way that you make presentations documents and web pages now as you'll see here I want to make a presentation based on building a SAS or software as a service business without Venture Capital so in your instance you could be making a presentation and let's say you've got a deadline you need to come up with something quickly use gamma and when you click on generate it will come up with an outline you then generate pick a theme and out comes a beautiful presentation just like this one complete with content and with images graphics and even different layouts for each of these slides I didn't touch a single bit gamma does it all for you so when you first log into gamma you'll be given three options you can paste existing text you may have such as notes an outline or existing content you can generate using AI just like how I did it we can import a file or URL from existing blog posts or articles on the web but in this case let's click on generate and this is where you can choose whether you want to create a presentation or a website or a document such as a PDF you describe what you want here are some examples right here once you've entered your text prom click on generate outline and out comes an outline which you can modify if you do wish to do so click on continue you'll then be able to pick a theme and as you saw before it's produced a beautiful present just like this one here and from here it's as easy as customizing the content if you wish to do so not happy with the content no worries get to the edit button right here under each of the slides that you're wanting to modify let's say this title here and you can improve the writing you can fix the spelling you can change the layouts too you can add elements using the sidebar right here with the card templates you've got smart layouts basic blocks images videos and media too can add Charts and diagrams too as you can see right here and if you don't like the whole look of your presentation no worries head to theme and then choose a new theme let's say gamma dark right here and boom just like that it's completely changed the whole look and feel of your presentation and once you're ready click on present or you can share export it to PowerPoint or PDF you can choose so think of gamma as a high-tech modern version of PowerPoint and it's intuitive really easy to use and there's no need to create a presentation from scratch starting today so making presentations and documents is all fine and dandy but when it comes to making videos what can you use what AI tool can produce actually good and decent videos well that's where this next tool comes in it's called Dream Machine by Luma and as the name suggests it really is a dream machine because you can totally convert text into videos

just like these examples right here to give you a better feel for what Luma dream machine can produce I've prompted lumma dream machine for a majestic underwater Kingdom where colorful schools of fish swim gracefully around towering Coral lefs with a glowing ancient sunken Temple in the background and a massive whale gliding pass effortlessly and look at what it's produced Simply Stunning now let me show you how Luma Dream Machine Works and how you can get started signing up is free and you get Generations or credits per month to use you simply enter a text promp in the text prompt field so in this case I've got a low angle shot of a majestic tiger prowling through a snowy landscape prom continues and here's the result we've got a majestic tiger prowling through a snowy landscape and it didn't quite leave P prints although it is quite close to that text prompt that I wanted all right next up have you ever wanted to create a website but the thought of Designing and creating a website it's just been daunting and intimidating you well no longer do you have to fear because this next one is called host iner hostinger is a web hosting company although they do have a powerful AI website builder that you can use and produce a complete website from scratch by simply entering a text prompt here's one I produce in a matter of minutes it's a travel website and specializing in Japan and if you want to travel to Japan you can visit this website it provides details on travel tips destination guides cultural experiences and I've got a list of guides that I am selling e books uh bear in mind this is just all hypothetical but this is what it's produced it's produced uh some of these elements these sections uh so that you can very well just start from this foundation and build up on this it's really as simple as choosing your website type entering your brand name and then describe what your business is about and this will feed the AI and it will then produce a website for you including content graphics and much more getting started is really easy all you need to do is use a link in the description box below that will take you to this web page and then all you need to do is claim the deal and then I recommend the business plan because it's going to give you Heap more benefits as well as all of these AI tools that you see here not to mention you can also set up your own shop or e-commerce store without any fees so they don't take a single bit from you once you choose the business plan head to have a coupon code and enter a coupon code the real is and click on apply you'll see the difference saving you further and then continue with the rest of the payment instructions once you've checked out you'll be given a couple of options to set up your website you can create a website using its AI website builder or WordPress I highly recommend using the AI website builder filling the details with the website type you can create an online store landing page blog portfolio so on and so forth enter your brand name describe it and then click on generate a website once it's created a website for you it's as simple as using the drag and drop functionality what you see is what you get this is what I really love about hostinger and it's I website builder there's no messing around with code really intuitive and it's even mobile friendly so you can then uh view it on mobile devices making it super friendly for those on mobile devices which makes up over 50% you can add particular elements such as text buttons and much more as well as sections by clicking on ADD section let's say you want to add a contact form head to contact form and choose from one of the pre-built sections and templates here want to add your own online store and sell your products and services all you need to do is head to online store right here continue with the setup process or manage your store from here so now you can finally start that new venture or that idea of yours that's been on the back burner for many months or years or you can get that personal portfolio or personal brand website up and running making you look more professional so go ahead use

the link in the description box below as well as the coupon code to start your website using AI moving on as you may already know Chad GPT is great but have you have a question to where Chad gbt sources his information from well this next tool solves all that it's called perplexity and perplexity is like Chad gbt but on another level it provides realtime results from multiple sources such as Google and big so as you'll see in this example I searched up meditation techniques in it provides an answer just like Chad gbt but it sources and you see it from here where it provide or source that information from so if I highlight over Source number one or reference number one you can see that it's come from this particular web page or website positive psychology while Source number two is from headspace you'll see all the sources listed all here and as I mentioned it does provide realtime results so you could very well search for your flight time let's say for qf12 today and it's provided all the information including the sources right here so simply put perplexity is best for research while chat GP is more like having a humano human conversation except of course you're chatting with an AI bot so all in all perplexity will be your best friend when it comes to researching information and getting upto-date realtime results but what if you only want to use your own sources you know your own PDFs documents notes research and findings instead of relying on the internet Gods well that's where this tool comes in it's called notebook LM and in fact this one comes from Google it's experimental as you can see for now but they've been working on it for quite a while and it's powered by Gemini 1.

pro at the time of this recording and I know I know you don't need another chatbot AI tool because you've already got probably chat gbt claw Gemini and now I just mentioned perplexity but the difference is with notebook LM is you can upload multiple sources although chat gbt can somewhat do this already and other uh tools too and as I mention you're just uploading your sources of information rather than relying on chat gbt for instance uh you know which scrapes the web so you see in this example this is a new project I'm let's say researching on the topic of calisthenics a form of exercise I added in a variety of sources right and different uh files and you can do this by simply clicking on the plus source and then upload your sources here link to a website paste in some text so this is going to make your research more accurate and only based on the documents and information and notes that you've provided and then from here what you can do is do what you usually do in chat gbt gemini or Claude by simply typing away you can very well create let's say an FAQ uh section or you can create a study guide a table of contents timeline briefing doc just to name a few things that you can do now you can start typing you can chat with the information that you've provided and what notebook LM can also do is produce kind of like an interview style uh audio so you'll see here right here I'll play it we're tackling Fitness Basics and let me tell you we found some great sources for this one we've got a really cool guide for beginners some interesting facts about calisthenics uh so you can see there's two kind of uh narrators on this audio and it's produced this all automatically and the great thing about notebook LM is that it's currently free since it's just experiment mental so go ahead take advantage of this and Leverage The Power of Google's notebook LM next up do you not only want to save time making and editing videos but also produce high quality videos that make it look like that you've hired a professional video editor well that's where this next tool comes in it's called teller teller is more than just a screen recording tool you can create videos of yourself and your screen at the same time as well as adding in cool effects and making it look all professional as I mentioned once you've recorded your video you can choose a layout based

on your preference and the look and feel that you want in just one click in addition to that the AI power really shows Once you head to the trim functionalities and you'll see silencers it's detected silencers you know those awkward silencers that you don't want to show when you are presenting a video it's detected you can remove it just one click and it's also detected fer words those RS um so you've got five fer words right here remove it with just one click by clicking on remove and all there it's gone let's remove those silencers too all gone too in addition to that you can add captions instantly by going to subs and then choosing a style and then you'll see the captions right there down the bottom you don't have to type a single word and once you're ready to share your video you can either download it as a video file or share it using a link but what if you don't want to show your face on video well that's where this next tool comes in it's called pictory pictory allows you to create videos from scratch by simply providing it content and then it will pick up and find relevant videos to add into to it and you can make these for shorts Tik toks reals or YouTube videos too I'll play a few seconds of a video that pictur produced for me based on my content so here it is as entrepreneurs we're juggling a lot we work family and personal goals so today I'm sharing five productivity tips that help me stay on track while running multiple project creting your first video is really easy all you need to do is provide it a script or you can use an existing blog post you may have but we're going to use script to video enter your video name such as three tips for entrepreneurs paste in that script you could very well produce some texts from chat gbt and then go from there and then it will generate a video for you complete with relevant video footage that it finds from freestock video sites so you can rest assured knowing that you won't get flagged for copyright and things like that it will also add the captions on each of the scenes for you you have the option to add an AI voice over such as this example here by going to audio then to voice over and then selecting one of the voices based on your content and the feel and look of it you can change your script by going to story and then changing the text on the scenes here you change the orientation of your video by going to Portrait or landscape here and then it will change it instantly and then once you're ready to share your video all you need to do is download the video and then you're off to gain more views and subscribers on your YouTube channel or other social media platforms and finally this one is a must have especially if you watch a lot of YouTube videos but you lack time it's called YouTube summary with Chad gbt it's a free Chrome or Safari extension that you install and here's how it works let's say you want to go through a 2hour podcast or video on YouTube it could be minutes or whatever however short you want and you simply don't have time I want to get a summary and a gist of this 2hour long podcast with Robert Green so I would click that and then once you land here you'll see the new transcript and summary bar click on the summarize video icon and this will take you to chat gbt so you will need a chat GPT or open AI account but clicking once will essentially paste in the entire script and including timestamps and then point forms it will summarize everything for you so if I want to dive into any of these sections further I will then go to these timestamps or I could just use this tool to give me a summary of it and then that will give me a better idea what this video is about and if I do want to learn more I will watch the full contents but just having that ability to be able to click once and have a complete summary rather than going through a 2hour long podcast is a huge timesaver all right friends and those are the eight AI tools I highly recommend you give a try and on that note let me know which of these intrigues you which ones you're going to give a try or use on a day-to-day basis let me know in the comments field in the meantime thanks so much for watching and I'll see you in

one of these videos right here
